

BRAIN INJURY PROGRAM OUTCOMES

STRIVING FOR EXCELLENCE

Mary Free Bed at Covenant gathers information on results achieved by patients served in its programs. These results are offered so you can see what others have accomplished during their inpatient stay.

We always learn from our patients about how to improve on excellent care, each and every time, no exceptions!

PERSONS SERVED

NUMBER OF PERSONS SERVED: **127**

Age ¹	MFB@CHC	Nation
Avg. Age	68	63

DISCHARGE TO HOME/COMMUNITY

At Mary Free Bed at Covenant, more adults with brain injuries receiving inpatient rehabilitation were discharged to live in the community compared to the nation.

Our average length of stay was 11 days compared to the national 15 days.

FUNCTIONAL IMPROVEMENT

Using the QRP Scale

The level of functional improvement of patients in rehabilitation is measured in points gained from admission to discharge for a variety of skills and abilities used in daily life. This is reported to the Centers for Medicare and Medicaid (CMS) through the Quality Reporting Program (QRP), which enables us to compare the functional improvement of Mary Free Bed at Covenant patients to other rehabilitation patients across the nation.

QRP FUNCTIONAL CATEGORIES

Self Care	Eating Oral Hygiene Toilet Hygiene Shower/Bathe Self Dressing
Mobility	Moving in bed Transferring to and from bed, chair, toilet and car Ambulation (walking) and/or wheel-chair mobility Stairs Retrieval of item from ground

BRAIN INJURY PROGRAM OUTCOMES

AVERAGE NUMBER OF THERAPY HOURS

The average number of therapy hours per day for adult inpatients with brain injuries includes time spent in physical therapy, occupational therapy and speech therapy. During FY2021, patients participated in an average of three hours of daily therapy over a five-day therapy week.

Additionally, and as needed, our patients receive psychology services, orthotics and prosthetics, respiratory therapy, recreational therapy, registered dietitian services and attend education and counseling sessions.

UNPLANNED TRANSFERS FOR ACUTE CARE¹

Under certain circumstances, a patient may demonstrate changes in his or her medical condition that warrant a transfer to acute care for close medical monitoring. If this occurs, patients are transferred to acute-care services and typically return to the inpatient rehabilitation program within a few days. During FY2021, the frequency of these transfers for patients with brain injuries at Mary Free Bed at Covenant was 13.4%, compared to a national average of 14%.

PATIENT SATISFACTION

In our most recent FY2021 patient satisfaction survey data for all inpatients, Mary Free Bed at Covenant achieved an overall satisfaction score of 96.3%. This compares to other inpatient rehabilitation programs in the normative data.
